

CCMS

CCMS is a back-end solution for provisioning and deploying managed Ceedo virtual workspaces to users through the Internet or local network. CCMS allows Ceedo customers to deliver customized, pre-configured portable virtual workspaces to end-users on multiple device types.

Workspace Provisioning and Deployment

CCMS addresses each of the stages of the workspace image lifecycle – from initial creation and deployment, through ongoing platform updates and self-service provisioning. The Ceedo lifecycle is as follows:

- **Creation & Provisioning**
 - Creation of basic Ceedo images containing the desired applications
 - Configuration of each image, including: application configuration, UI settings, update options, usage limitations, and “user group” associations (i.e., finance department, sales department, etc.)
- **Deployment**
 - Images are packaged and uploaded to a distribution server where they can be linked to a web page for self-service installation, or loaded onto a user’s PC using a logon script
 - Images can also be loaded onto USB drives for distribution to users, and then run directly from these drives

- **Update Management**
 - Once in the field, the Ceedo client software can be updated automatically over the web

CCMS Capabilities

- *Configure "stock" Ceedo workspace distributions to customize them to your needs, including UI changes, unique welcome screen, application catalog access and user-controlled client settings*
- *Enable administrative client features, such as Windows shell integration, password rules and host checking*
- *Create Ceedo "gold master" image files for hardware replication, or deploy them from a standard web server over the Intranet or Internet*
- *Allow self-service deployment of Ceedo workspaces by end-users, to a local folder or portable storage device, by packaging images using Ceedo's proprietary installer technology (CII)*
- *Control Ceedo client updates on a site and group level, ensuring end-users are using the latest Ceedo software version*

Try Out Ceedo Enterprise, Today!

To download a trial version of the Ceedo Enterprise client and set up your own workspace to try out for 30 days, please visit:

About Ceedo

Ceedo Technologies delivers virtualization solutions that extend the reach of business IT to unmanaged devices such as an employee-owned PC or laptop, low-cost netbook or expendable USB storage. By enabling the user's application workspace to run on any device, Ceedo allows customers to provision teleworkers, temps, contractors and business partners immediately without the need to manage additional desktops or increase their datacenter capacity. Ceedo's products have been deployed on over 4 million devices worldwide, where they are managed and used daily by consumers, enterprises and service providers. The company was founded in 2005 and is headquartered in Rosh Haayin, Israel.
