

Benefits

Enable teleworkers, contractors and partners to work without the need to provision and manage a laptop or desktop PC

Provide data mobility without compromising security policies by combining with hardware encryption and two-factor authentication

Securely provision, deploy, and manage – even for very large user populations – with greater simplicity and lower TCO

Allow for a customizable end-user experience, including corporate branding

Laptop Alternative

Ceedo enables enterprises to equip internal and external employees (contractors, temps), as well as sales channels, business partners and points of sale -- with just the essential business applications -- no need to provision and manage laptops.

The Business Challenge

In an increasingly complex IT world, maintaining laptop PCs is an expensive endeavor. But as it turns out - most of the cost comes from the constant hours spent installing, removing, updating and troubleshooting software.

On top of the direct IT maintenance time lost, there is also employee downtime and lost productivity while waiting for IT personnel to address the user's issues and needs.

Reducing the time spent on managing and updating laptops lowers costs and allows IT to focus on the value added activities it wants to provide and is expected to drive.

The Ceedo Solution

Using Ceedo's software, an administrator working in a lab environment can fully configure, test and encapsulate a complex set of business applications – a secure, managed virtual workspace.

The Ceedo workspace is then easily replicated and distributed to end-users on a USB external storage device or via a download link. Then, all its applications can be launched securely on any host PC without requiring any installation process.

The workspace uses the host PC's operating system and hardware resources (e.g. internet connection, printer) without altering the host PC itself. Ceedo's solution is robust, non-intrusive, requires no special expertise, and runs on any PC alongside existing applications.

Ceedo's online application catalog aggregates applications for one-click, self-service installation directly into a Ceedo workspace, where they become ready to use in minutes. End-users can thus update and expand their workspace with a single click, or alternatively, the administrator can update all the workspaces in the field simultaneously with a few keystrokes on the Ceedo management back-end.

Ceedo's Workbench management system efficiently supports an unlimited number of deployed Ceedo workspaces; each time the workspace is launched it is automatically updated.

Try Out Ceedo Enterprise, Today!

To download a trial version of the Ceedo Enterprise client and set up your own workspace to try out for 30 days, please visit:

About Ceedo

Ceedo Technologies delivers virtualization solutions that extend the reach of business computing to unmanaged devices such as an employee-owned PC or laptop, low-cost netbook or secure USB storage. By enabling the user's application workspace to run on any device, Ceedo allows customers to provision teleworkers, temps, contractors and business partners immediately without the need to manage additional desktops or increase their datacenter capacity. Ceedo's products have been deployed on over 4 million devices worldwide, where they are managed and used daily by consumers, enterprises and service providers. The company was founded in 2005 and is headquartered in Rosh Haayin, Israel.
