

## Benefits

Sandboxed environment enhances the security of opened files

Ability to view email attachment files as well as files from the company's secure web portal

Complete control by the IT department over the managed workspace

Optional two-factor PKI authentication logon to the company's webmail and secure portals from any PC including kiosks

Optional hardware encryption secures the data on the drive for reduced exposure to theft and loss

## Secure Email and Portal Access

**Web mail solutions provide remote access to corporate email from an unmanaged host computer, but are they secure? Untrusted host PCs can be susceptible to numerous threats and using them can lead to data loss, identity theft and unauthorized access to confidential resources.**

### The Business Challenge

Web-based solutions that provide remote access to confidential resources are a critical weak point in modern computing scenarios. Providing remote access to end-users is required, but can lead to a variety of security risks.

Because end-users could be using any unmanaged PC, whether at home or on the road, they leave themselves and the organization vulnerable data loss – such as when temporary files are left behind on the host PC.

On untrusted hosts the danger of key-loggers and other forms of malware is particularly great, but user error and carelessness can be as great a cause of data protection risk.

### The Ceedo Solution

Ceedo Enterprise provides an ideal solution for secure access to corporate email and portals. Documents and attachments are accessed through the Ceedo environment, preventing footprints from being left behind on the host PC.

Two-factor PKI authentication for applications running inside the Ceedo workspace makes it possible to use on unmanaged PCs, with complete protection.

### Solution Components:

- USB drive for user data, temporary web files and PC applications, with restricted write access to the host PC.
- Microsoft Office viewers can make sure that no temporary backups are made and left behind.
- Profiled and sandboxed Internet browser pre-configured with the corporate web mail portal credentials.
- Two-factor token based authentication is much stronger than password-only.
- Hardware encryption makes physical data loss a non-issue.

## Try Out Ceedo Enterprise, Today!

To **download a trial version** of the Ceedo Enterprise client and set up your own workspace to try out for 30 days, please visit:

### About Ceedo

Ceedo Technologies delivers virtualization solutions that extend the reach of business computing to unmanaged devices such as an employee-owned PC or laptop, low-cost netbook or secure USB storage. By enabling the user's application workspace to run on any device, Ceedo allows customers to provision teleworkers, temps, contractors and business partners immediately without the need to manage additional desktops or increase their datacenter capacity. Ceedo's products have been deployed on over 4 million devices worldwide, where they are managed and used daily by consumers, enterprises and service providers. The company was founded in 2005 and is headquartered in Rosh Haayin, Israel.
