

Benefits

Increased employee productivity

Reduced support cost – no need to provision an unmanaged home PC

Complete control by the IT department over the managed workspace

Less exposure to theft and breakage

Optional hardware encryption and synchronization solutions

Work from Home

Employees taking their laptop home is common practice these days, exposing enterprises to the risk of theft and damage. And though home PC's can be used for work, they cannot easily reproduce the productivity of the office workspace.

The Business Challenge

Although a home PC can be used to work at home, it cannot reproduce the productivity of the office workspace, which includes access to resources and specially-installed applications.

The Ceedo Solution

Using Ceedo, employees can leave their laptop behind and take their full work environment home with them on a portable USB hard drive or flash drive device.

Employees can run their office applications from their home PC or any other PC or laptop when they travel. The drive image can be created, controlled and managed by the enterprise.

Solution Components:

- Ceedo Enterprise Client with Office applications, including Outlook email client and any other applications needed, including self developed Windows applications and VPN client if needed
- Encrypted USB drive
- Sync software to sync data from the work PC to the USB drive

Try Out Ceedo Enterprise, Today!

To **download a trial version** of the Ceedo Enterprise client and set up your own workspace to try out for 30 days, please visit:

About Ceedo

Ceedo Technologies delivers virtualization solutions that extend the reach of business computing to unmanaged devices such as an employee-owned PC or laptop, low-cost netbook or secure USB storage. By enabling the user's application workspace to run on any device, Ceedo allows customers to provision teleworkers, temps, contractors and business partners immediately without the need to manage additional desktops or increase their datacenter capacity. Ceedo's products have been deployed on over 4 million devices worldwide, where they are managed and used daily by consumers, enterprises and service providers. The company was founded in 2005 and is headquartered in Rosh Haayin, Israel.
